

CTS Electronics Manufacturing Solutions Achieves AS9100 Certification for Aerospace Manufacturing at Scottish Facility

Provides Localised Manufacturing & Offset Opportunities for OEMs

CTS Electronics Manufacturing Solutions' (EMS) facility in Glasgow, Scotland has successfully achieved AS9100 certification. CTS is only the third EMS provider in the UK to receive certification and the only Tier Two Provider to do so. Scotland is the third CTS EMS facility to be certified for aerospace manufacturing, after the group headquarters in Moorpark, CA and in Santa Clara, CA.

AS9100 is the international quality management standard for designers and manufacturers of equipment for aerospace applications. CTS has actively pursued this certification as part of an ongoing global quality roadmap

to meet the needs of customers in this high reliability, high technology sector. Scotland is also the first CTS facility in Europe to be AS9100 certified.

Don Schroeder, President of CTS EMS, commented, "The achievement of AS9100 in the UK is significant. CTS is a major manufacturing services provider to the aerospace sector and our strategy is to serve customers with a need for high reliability, higher technology equipment in their home region, as well as providing the opportunity to meet offset regulations worldwide. Very few CEMs in the UK have achieved AS9100, so I am proud that the UK team continues to delight our customers, particularly as it follows so closely behind our 2006 Product Quality Leadership Award in the defense and aerospace sector, presented by Frost & Sullivan in February."

CTS' range of products and services provided to the aerospace sector includes product design and develop-

ment, highly complex, high reliability SMT and backplane assembly and fully integrated box build systems, global NPI and volume product transfer and micro-electronic assembly.

Moorpark, CA March 5th 2007

CTS' Products & Services for the Aerospace Sector

- * AS9100 & Mil Spec Certifications
- * ITAR & NISP Participation (US Sites)
- * IPC Class III Build Standards
- * Complex PCB & Backplane Assembly
- * Box Build & Systems Integration
- * Global Manufacturing - USA, UK & Asia
- * Offset Opportunities in the US & UK
- * Wire Bonding & Clean Room
- * Development Engineering Services
- * Global Supply Chain Leverage & Logistics
